Code Review Report — PR #7
Repository: ikondocumentation/ikon_v_9
Reviewer: CodeRabbit AI
Severity Summary:
- Critical Issues: 10
- Overall Recommendation: Changes Required Before Merge

1. Executive Summary

The pull request contains template modules, frontend apps, backend services, and Kubernetes manifests. Multiple critical issues found including template inconsistencies, wrong Java version, hard-coded secrets, security vulnerabilities, and more.

2. Major Critical Issues

- Wrong packaging type (pom -> jar)
- Java 8 incompatible with Spring Boot 3.4.x (must use Java 17+)
- Avro namespace hardcoded
- Avro Java class schema namespace mismatch
- Builder class uses incorrect package
- Frontend Dockerfile insecure and not production optimized
- Next.js version contains known CVEs
- Vulnerable Spring Boot version
- Hardcoded secrets in Kubernetes Secret YAML
- SPI interface method incomplete

3. Action Items Checklist

- Update packaging
- Upgrade Java version
- Fix namespaces
- Update builder package
- Apply multi-stage Dockerfile
- Add .dockerignore
- Upgrade Next.js
- Upgrade Spring Boot
- Remove hardcoded secrets
- Fix onEditGroup() parameters

4. Final Recommendation

DO NOT MERGE. Fix all critical issues before re-review.
